

VALIDATED SHARED BASELINE

Flood resilience

A concise evidence baseline for the Urban Flooding resilience journey. This report captures the shared starting point used in P2R Phase 1 and supports the next collaborative phase without repeating a new climate risk assessment.

CLIMATE IMPACT	Urban Flooding
CONTEXT	Flood risk affecting the built environment and critical urban infrastructure.
CLIMATE HAZARDS	Floods
PRIMARY SYSTEM	Built Environment
AFFECTED SYSTEMS	Water; Health; Transport; Emergency Response / Civil Protection
AREA	Western Athens, Region of Attica

Vulnerabilities

Urban flooding, overheating, sealed surfaces, ageing building stock and unequal access to safe public space.

Relevant RCCAP measures

Explore blue-green infrastructure, cooler neighbourhoods, building upgrades and resilience-led spatial planning.

PHASE 1 OUTCOME	Validated baseline and common understanding of the resilience challenge.
